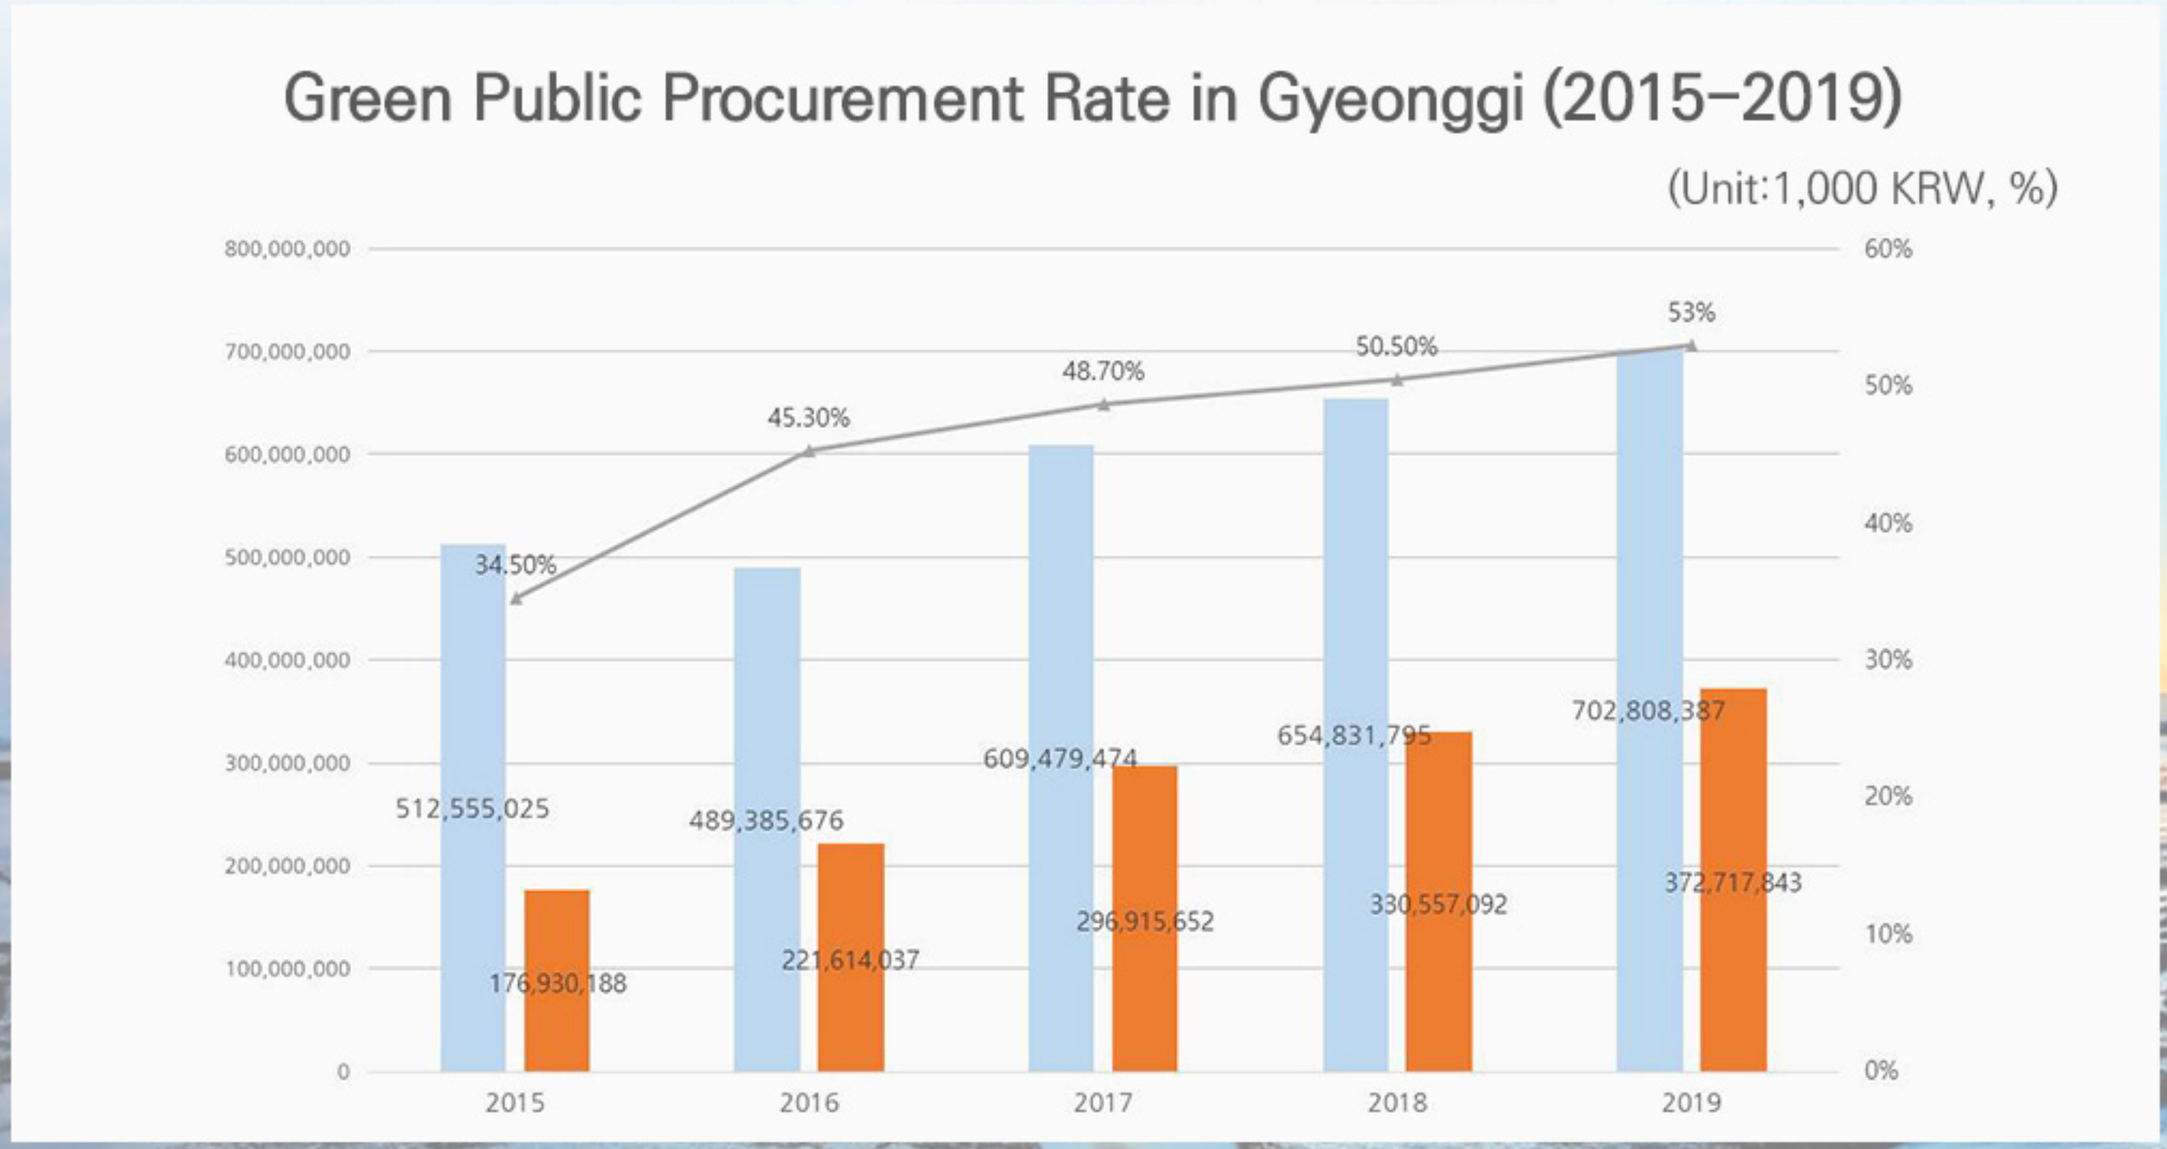
Gyeonggi Province | Promoting Green Public Procurement through Cooperation with Lower-level Local Governments

The key concept of Gyeonggi's green public procurement policy is **cooperation with its 31 lower-level local governments.** The province has encouraged implementation of green public procurement in its cities and counties via quarterly monitoring and offering incentives such as awards to high-performance local governments.

In an attempt to **reduce competition for preferential procurement, particularly for companies including women, the disabled and social enterprises, and to promote co-prosperity,** Bucheon, one of the cities in Gyeonggi, has allowed companies to obtain multiple green certificates.

※ Gyeonggi Province ranked first among provinces nationwide in green public procurement rate for five consecutive years!



Catalonia, Spain | Socially Responsible Public Procurement

Catalonia has taken the lead in **socially responsible public procurement(SRPP)** to spread social values through its green public procurement policies.

- ✔ Embracing the socially underprivileged by helping the disabled to engage in public contracts
- ✔ Requirement to conform with international labor standards for public contracts
- ✔ Annual budget allocation for public contracts to support gender main-streaming and equality

※ Criteria centering on green public procurement in Catalonia (applicable to public procurement guidelines and actual bidding)

The dialogue was indeed an opportunity for the first policy exchanges between Gyeonggi and Catalonia for the realization of social values through inclusive green public procurement.

Daejeon Metropolitan City | Spread of Green Consumption Culture through System Improvement

Daejeon has included performance ratings regarding green public procurement in its department assessment system called Balanced Scorecard(BSC) to raise awareness of green public procurement throughout all departments and to spread a **green consumption culture.**

※ Creation of guidelines regarding recycled construction materials such as recycled asphalt concrete and drainpipe

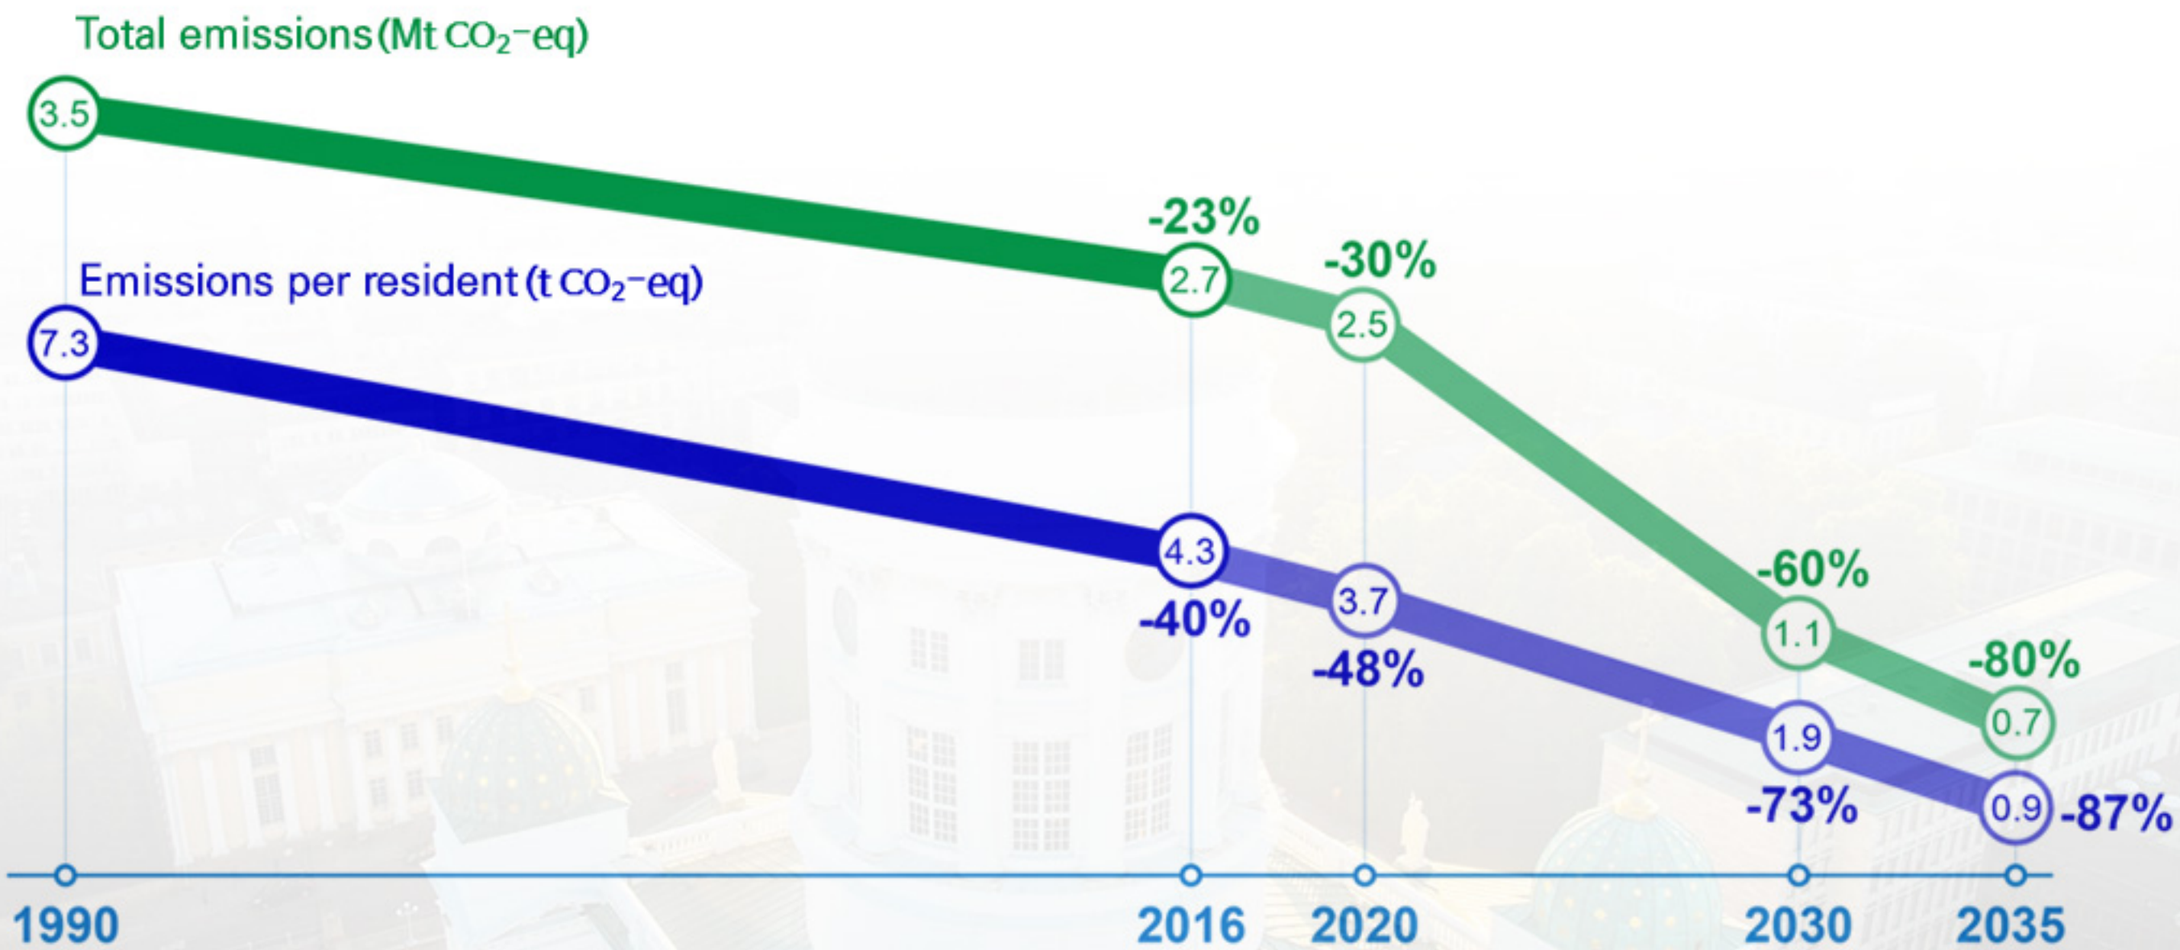
Guidelines on Green Public Procurement

Practical Guidebook for Construction Projects

Helsinki, Finland | 2035 Carbon-neutral Helsinki

Helsinki has set an ambitious target for **Carbon Neutrality by 2035** and is utilizing sustainable public procurement as a key tool to turn the target into action.

- ✔ Developed a circular and sharing economy roadmap for transition to a circular economy
- ✔ Plan to introduce new criteria taking into account the life cycle and climate perspective in procurement



Helsinki

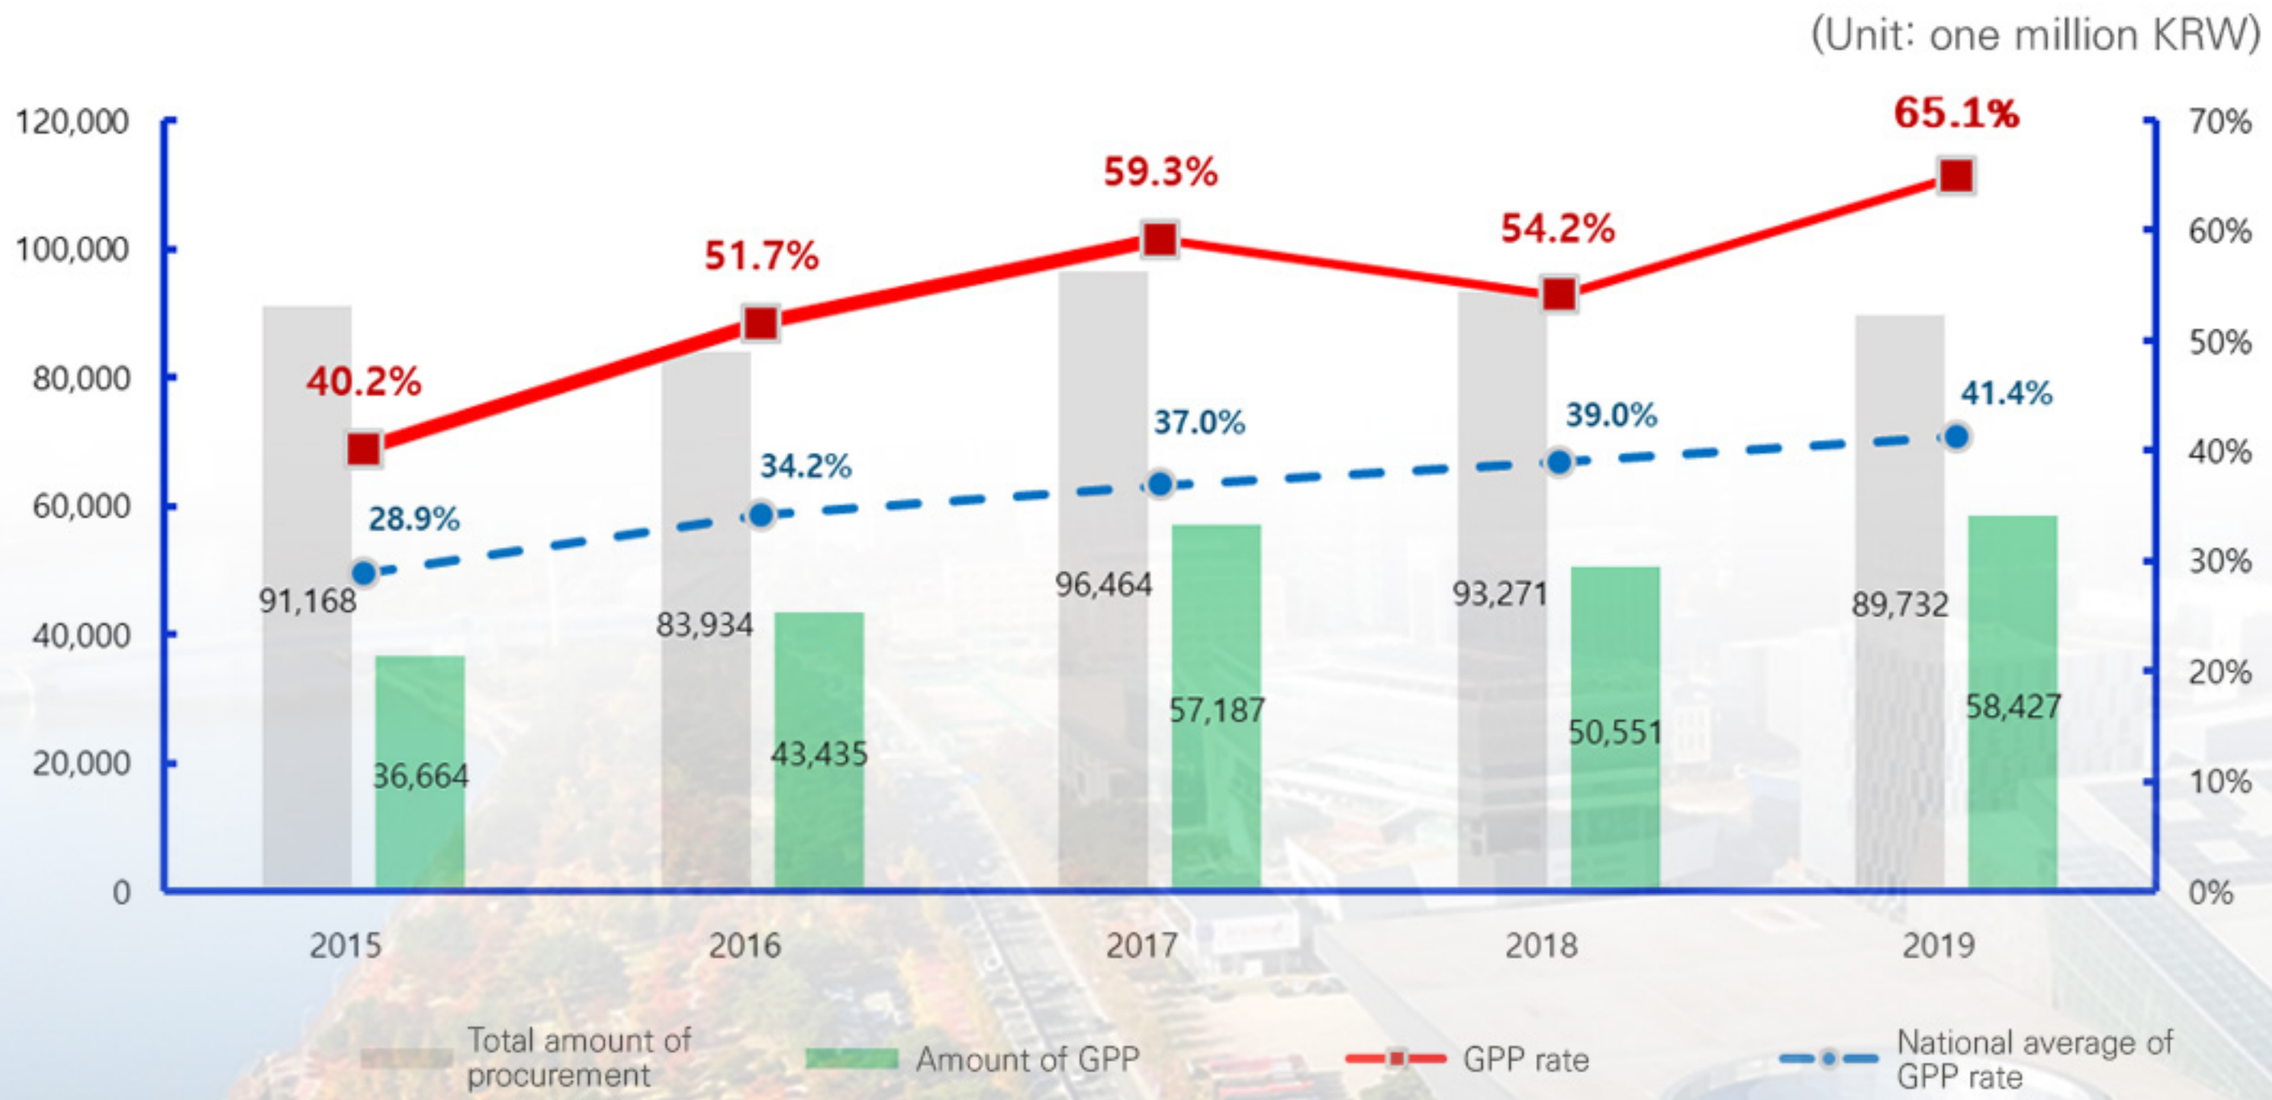
Daejeon and Helsinki engaged in a meaningful discussion, sharing targets, best practices and challenges in their implementation of green public procurement.

Busan Metropolitan City | Promoting Green Public Procurement through System Innovation

Busan has introduced a Procurement Screening System to promote green public procurement through system improvement and pushed ahead by implementing the system in 16 counties and districts.

※ In a matter of four years since the introduction of the system, it achieved a public green procurement rate of 65% in 2019 (An increase by 20 percent compared to 2016; the average rate among local governments stood at 41% in 2019.)

First Achievement of 60% Green Public Procurement (2019) and First/Second Ranking Nationwide for 4 Years)

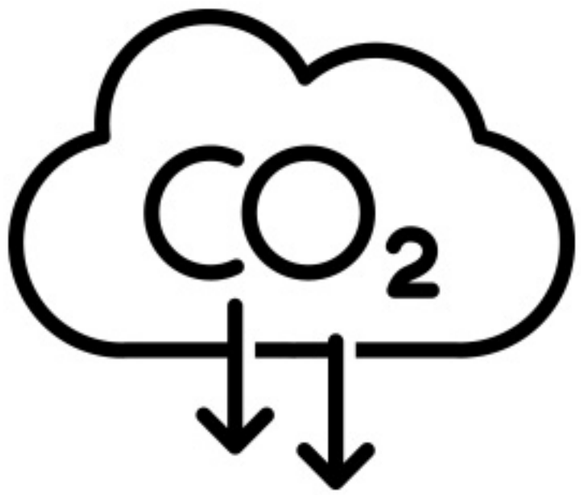


Oslo, Norway | 95% GHG Emissions Reduction Target by 2030

Oslo has set an ambitious target of a **95% reduction in emissions by 2030** and implemented the world's first climate budget under which the GHG reduction targets and budget are interlinked.

Oslo has enjoyed various successes from green public procurement, a key tool for achieving its climate targets.

- ✔ World's first zero emission construction site
- ✔ Multiple goods and service contracts with zero emission deliveries
- ✔ 71% of the city's own fleet is comprised of zero emission vehicles



The Busan-Oslo dialogue served as a meaningful seminar for the two cities who strive for sustainability by expanding the scope of sectors subject to green public procurement.

KEITI and ICLEI Korea Office will continue to support the Twin Cities Groups which ushered in the first chapter of exchanges through the webinars, in order to expand it into a global leading city network that can play a crucial role in spreading sustainable consumption and production (SCP).

This Card News was created as part of the
“Leading City Network for Green Public Procurement” project,
funded by KEITI and implemented by the ICLEI Korea Office.
